## MANUAL SEQUENCE VALVE

Allows the marker to be operated from one tractor remote. Markers operate alternately with each operation of the hydraulic lever. This valve works on the return oil, slight movement of the marker not being extended may occur.  
INCLUDES PILOT OPERATED CHECK VALVES AT THE MARKER TO ELIMINATE MARKER FADE BACK.

## FAN HYDRAULIC CIRCUIT VALVE (Electric over hydraulic).

Oil comes from air drill fan circuit. No additional hoses or valve bank is required. An electric switch positioned left or right chooses which marker will operate. Pilot operated check valves restrict oil flow to and from cylinders unless desired. Marker arms will stay fully extended or fully retracted with no cylinder fading.

(UPGRADE PRICE for previously purchased markers)
