

WING TIP INJECTION TUBES

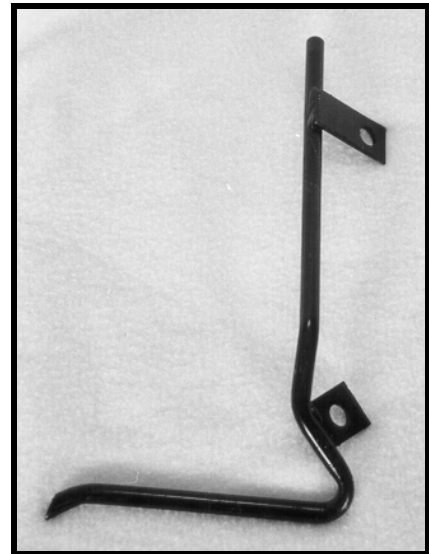

(Custom Fit)

Apply anhydrous ammonia at the time of seeding using a tube that is form fit to the back of the sweep and extends out to the tip of the sweep wing. Wing tip injection of NH₃ is safe from seed damage and requires little extra horsepower.

EXAMPLE: Case 11" LD
With Farmland SB4 seed boot

Example: Concord
boot and transition

Can be made to fit most any
combination of sweeps and
seed boots

NOTE:

When ordering, please specify make and width of sweep, seed boot style and type of shanks used. If we have not made a tube for this exact combination, we will require a seed boot and sweep as a sample.

SET UP CHARGE:
There will be a \$60.00
fixturing charge on all first
time orders

- **Inject fertilizer at the tip of a sweep**
- **Custom fit to most systems**
- **No additional horsepower required**
- **Lower cost alternative to deeper injection**

	<u>Order #</u>	<u>Price</u>
