AMITY TECHNOLOGY, LLC LIMITED WARRANTY FOR NEW PRODUCTS

1. **General Provisions.** This Warranty shall apply to the original purchaser of (1) any new and unused machine manufactured by Amity Technology, LLC ("Amity"), and (2) any new and unused part which is manufactured by Amity for use in an Amity machine, jointly referred to as "Products," whether such Product is purchased through a dealer or directly from Amity. Under this Warranty, Amity will repair or replace, as it chooses in its sole discretion, any covered Product, or any component thereof, which Amity determines to be defective. This Warranty shall be in effect for a period of twelve (12) months ("the Warranty Period"), beginning on the date of delivery of the covered machine or part by the dealer or Amity to the purchaser ("the Warranty Start Date"). The purchaser must pay the cost of transportation of a Product to be repaired or replaced to and from an authorized Amity dealer. This Warranty may not be transferred from the original purchaser of a Product to any other person. This Warranty does not give a purchaser the right to any relief other than repair or replacement of the Product, and it specifically does not allow for consequential or incidental damages, exemplary or punitive damages, or costs and fees.
2. **Scope and Limitations of Warranty.** With respect to machines, this Warranty is void if any part not supplied by Amity is used in assembly or repair of the machine, or if the machine has been altered, abused or neglected, as determined by Amity. With respect to parts, this Warranty is void if the part is used in any manner other than that for which it is intended. This Warranty does not extend in any way to tires and any other component of a Product warranted by another manufacturer, a copy of which warranty is provided herewith ("Third-Party Warranties"). In the event Amity determines that a Product is not defective, or that any other provision of this Paragraph 2 operates to limit the Warranty, this Warranty shall not apply and the purchaser shall be responsible for transporting the Product from the authorized Amity dealer's location within 10 days of notice by Amity.
3. **Procedures for Obtaining Service.** To secure Warranty service, a purchaser must (1) report the defect to an authorized dealer and request repair within 45 days of the failure and within the Warranty Period; (2) present evidence that this Warranty applies to the Product; (3) present evidence of the Warranty Start Date; and (4) bring the Product to an authorized Amity dealer within a reasonable period of time after reporting the defect.
4. **LIMITATION OF IMPLIED WARRANTIES AND OTHER REMEDIES.** To the extent allowed by law, neither Amity, its dealers, nor any company affiliated with Amity makes any warranties, representations, or promises as to the quality, performance, or freedom from defect of any Product covered by this Warranty.
AMITY HEREBY WAIVES, TO THE EXTENT APPLICABLE, ANY AND ALL IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. A PURCHASER'S ONLY REMEDIES IN CONNECTION WITH THIS WARRANTY ARE THOSE SET FORTH ON THIS PAGE. IN NO EVENT WILL AMITY, ITS DEALERS, OR ANY COMPANY AFFILIATED WITH AMITY BE LIABLE FOR INCIDENTAL, CONSEQUENTIAL OR PUNITIVE DAMAGES.
Some states do not allow waivers of certain warranties, so the above waivers may not apply to you. You may also have other rights which vary from state to state.
5. **No Dealer Warranty.** This is the exclusive warranty applicable to Amity Products. No dealer has any authority to make any other warranty, modify, limit, or expand the terms of this Warranty in any fashion, or make any representation or promise on behalf of Amity.
6. **Dispute Resolution.** Any controversy or claim arising out of or relating to this Warranty must be settled by arbitration in Fargo, North Dakota, at a time and location designated by the arbitrator, but not exceeding 30 days after a demand for arbitration has been made, and may be conducted by electronic, video, or other technical means. Arbitration will be conducted by the American Arbitration Association in accordance with its Rules of Commercial Arbitration, and judgment upon the award rendered by the arbitrator may be entered in any court having jurisdiction thereof. The arbitrator will have the authority to order Amity to undertake a repair or replace any Product, at its election, if the arbitrator finds that this Warranty requires Amity to do so. The arbitrator will not have the authority to impose any other remedy against Amity, including without limitation consequential or incidental damages, exemplary or punitive damages, or costs and fees.

PRECAUTIONS

SAFETY FIRST

The purpose of this manual is to assist you in safely operating and maintaining your Amity Technology equipment. It is the responsibility of the owner to ensure that any operator takes the time to thoroughly read and understand the information given.

It is not possible to overstate the importance of safety. Serious injury or death can result from improper operation of any farm equipment. We have taken great care to point out potential hazards that require special consideration.

Give all precautions and warnings the attention they deserve. The following symbol is used throughout the manual to alert you to them.

WARNING

ALWAYS know your equipment, **Read owners manual** before operating.

DO NOT allow anyone to ride on air system.

ALWAYS install and transport stops when transporting drill.

ALWAYS use adequate tow vehicle.

ALWAYS remember to properly secure safety chain.

DO NOT Transport over 20 MPH (32 KmPH).

DO NOT modify or alter this equipment without first contacting Amity Technology, LLC.

CAUTION

ALWAYS keep decals free of dirt and replace if they become damaged. See parts section for proper placement.

ALWAYS avoid high-pressure fluids. Use a piece of cardboard to search for suspected hydraulic leaks.

FEATURES

SAFETY RAILING

Always make sure that the safety railings are secured in the raised position when operating the air system. The railings may be lowered for storage if required.

To lower railings, removed the top bolt from each of the legs on the railing sections. Rotate the railing section down so that they hang beside the air system and reinsert the bolts in the holes for storage.

CAUTION: DO NOT LOWER THE RAILINGS WHILE STANDING ON THE CATWALKS. USE A SUITABLE LADDER AND LOWER THEM FROM BELOW. ALWAYS HAVE THE RAILINGS RAISED WHEN WORKING ON TOP OF THE AIR SYSTEM.

LIDS

The compartment lids on the air system compartments must be properly sealed for the meters to deliver product properly.

Periodically check the lid for proper adjustment and inspect the seal for damage.

Check the following for proper lid adjustment.

1. When lid is unlatched the lid should raise slightly on the latch end as shown in fig 3.
2. A firm pull should be required to over center the latch.

To adjust the hinge end of the lid, loosen or tighten the jam nuts on the hold down bar. (Fig.2)

To adjust the latch, loosen or tighten the nuts on the toggle u-bolt. (Fig. 3)

In the off season, it is recommended that the latch be released to relieve pressure on gasket.

CAUTION: IF EQUIPPED WITH SCREEN BASKETS, DO NOT STEP OR LEAN ON SCREENS. THEY WILL NOT SUPPORT A PERSONS WEIGHT AND MAY FALL INTO THE TANK RESULTING IN INJURY.

Figure 1

Figure 2

Figure 3

BLOWER

The blower on the air system is supplied oil by means of two 3/4" hydraulic lines. A check valve (1) between the lines near the blower prevents the motor from running backwards. The check valve also prevents motor cavitation during shut down.

A third smaller line (1/2") connected to the blower motor is a case drain line. It is imperative that this is connected to a line directly to the tractor reservoir. Back pressure on this line will cause the shaft seal on the motor to fail. It is recommended to use a female connector on this line at the tractor connection so that this line cannot accidentally be connected to pressure.

CAUTION!!! BE SURE THAT THE CASE DRAIN LINE ON THE BLOWER MOTOR IS NOT CONNECTED TO PRESSURE. DAMAGE TO SHAFT SEAL OR MOTOR WILL RESULT.

The only serviceable part on the blower is the shaft seal. This may be replaced if the motor leaks at the shaft. Do not disassemble motor to replace shaft seal. It is secured by a snap ring and can be removed with a seal pick.

WARNING!!! DO NOT UNDER ANY CIRCUMSTANCES DISASSEMBLE MOTOR. IT IS VERY DIFFICULT TO ASSEMBLE CORRECTLY AND MOTOR DESTRUCTION WILL RESULT FROM RUNNING AN INCORRECTLY ASSEMBLED MOTOR.

HYDRAULIC CAPACITY

To run the hydraulic blower at the appropriate fan R.P.M., the tractor must have the following hydraulic capacities:

<u>FAN R.P.M.</u>	<u>HYDRAULIC REQUIREMENTS</u>
5000	13 GPM at 1500-2200 PSI
6000	16 GPM at 1700-2450 PSI

The number of outlets on the drill will directly affect the fan R.P.M. The more outlets in use, the higher the pressure required to maintain fan R.P.M. See your dealer for hydraulic adjustments to your tractor, if necessary.

A diverter valve (2) above the blower selects fan or auxiliary (auger and/or winch) function. Push knob in to run blower. Pull knob out to run auger or winch.

AUGER

(Fig. 4)

The hydraulic auger is supplied with oil from the blower hydraulics. A diverter valve above the blower directs oil to the auger. This may be switched with the blower running.

The auger also has a three position variable speed valve mounted on it to run the auger forward, backward or to stop.

Figure 4

LOADING/UNLOADING

The auger is mounted on a swing arm that allows the flexible hose of the auger to be moved to each compartment without moving the hopper. The swing arm allows the auger to be turned around to unload and clean out the compartments.

Figure 5

CLUTCH

(Fig. 6)

The magnetic clutch uses electrical power to hold it engaged. The clutch is turned on and off from the switch box or an optional automatic remote clutch switch which turns clutch off when drill is raised. The clutch requires no service. When transporting long distances, remove the drive chain at the drive wheel. This will extend chain and sprocket life.

NOTE: MAXIMUM RECOMMENDED TRANSPORT SPEED IS 20 MPH

Figure 6

GEAR BOX

(Fig. 7)

The gearbox is filled with oil at the factory and does not require service. If a visible leak appears at one of the seals, repair the box and fill half full with 85W90 oil.

The drive line components are protected by a shear pin located on the gearbox coupler. If the pin fails, locate reason for the failure, remove, and install a new shear pin.

Figure 7

To replace shear pin:

(Fig. 8)

1. Loosen bolt on locking tab and rotate tab out of machined groove in shear pin.
2. Remove broken shear pin pieces and line up holes in coupler with hole in shaft.
3. Install new shear pin.
4. Rotate lock tab into machined groove on shear pin and tighten the bolt on the tab.

Figure 8

TIRES AND RIMS

(Fig. 9)

Inflate tires to pressure indicated. Torque lug nuts to 140 ft/lbs and retighten after the first 10 hours of operation.

 CAUTION! 		
TIRE PRESSURES		
TIRE SIZE	TIRE PLY	TIRE PRESSURE
18.4 X 26.0	10	26 (MAX)
23.1 X 26.0	8	16 (MAX)
23.1 X 26.0	10	20 (MAX)

Figure 9

SEED METERS

The seed meters deliver product from the seeder tank to the air stream by means of a fluted roller. The amount of the roller that is being used determines the rate at which product is applied.

OPERATING

LOADING

NOTE: Auger can be used to load and unload seed tanks. Auger may be adjusted on brackets to suit operators needs.

(Fig 10)

To place the auger in operating position:

1. Drop front bracket lock pin only far enough to release the small pivot arm.
(Unpin long arm only to unload.)
2. Loosen lock assembly. (Tee Handle)
3. Remove auger from rear clamp assembly.

(Fig. 11)

1. Swing the hopper end of the auger away from the Air System and allow the short pivot arm to come out, away from the machine.
2. Place the hopper on the ground in a position perpendicular to the center line of the tanks with the discharge end of the auger between the compartment lids. From this position the discharge end of the auger should be able to be moved between compartments without moving the hopper.

Figure 10

Figure 11

UNLOADING

(Fig. 12)

1. Swing large arm far enough away from the machine to allow the hopper to fit between the wheels.
2. Place hopper under meter for compartment you wish to empty.

Figure 12

(Fig. 13)

1. Close metering slide.
2. Remove seed meter door.
3. Open metering slide to control flow from the compartment.

NOTE: Removing pointer allows gate to be opened without changing the rate setting.

Figure 13

(Fig. 14)

To clean out auger:

1. Tip hopper upside down to empty.
2. Run auger backwards until auger tube is empty.

Figure 14

BLOWER SPEED

The blower should be run at as slow a speed as possible to prevent damage to seed. If run too slow, line blockage will occur. Typical blower speeds are between 3800 and 6000 RPM. Drill width, product, rate, humidity and other factors affect blower speed.

One method to determine blower RPM is to remove a final run from the seed boot or shoe. Hold the hose about 5 feet off of the ground pointing straight up. Turn product out of the meter with the blower running. The product coming from the hose should blow out of the hose about 8 inches into the air. Adjust blower RPM accordingly.

If you do not have a run blockage monitor, carefully watch to see that all runs are operating after changing blower speeds. To check runs, turn meter(s) with blower running and look to see that there is product at each ground opener.

WARNING!!! DO NOT UNDER ANY CIRCUMSTANCES DISASSEMBLE MOTOR. IT IS VERY DIFFICULT TO ASSEMBLE CORRECTLY AND MOTOR DESTRUCTION WILL RESULT FROM RUNNING AN INCORRECTLY ASSEMBLED MOTOR.

A diverter valve (2) above the blower selects fan or auxiliary (auger and/or winch) function. Push knob in to run blower. Pull knob out to run auger or winch.

SEED METERS

The seed meters deliver product from the seeder tank to the air stream by means of a fluted roller. The amount of the roller that is being used determines the rate at which products is applied.

There are two moveable components in the meter that make up a rate setting. The primary setting is a flow plate that is adjusted by means of a rod connected to a pointer. When a rate setting is selected, the pointer is simply placed at that number on the rate decal. A lock bolt on the pointer rod secures the setting. The second part of the adjustment is the meter shut off slide. For any rate setting the proper place for shut off slide is against the stop on the pointer. This opens the bottom of the tank compartment the proper amount for the rate setting. A 1/2" drive ratchet supplied in the toolbox is used to adjust the meter shut off slide.

Any time that a new rate is set, the rate setting should be confirmed by calibrating the meter.

A scale and catch bag are supplied in the tool box for calibration.

Once a rate setting is determined from the rate charts and the meter is set to that setting, follow these steps to perform a calibration.

When using both tanks for one product, set each meter to the desired rate from that meter.

EXAMPLE: If you desire to seed 120 lbs. of wheat using both meters, split the desired **pounds per acre** rate to the ratio of the size of the tanks. i.e. If the Air System is a 60/40 split, set one meter to 72 lbs. (120 x.6) and the other meter to 48 lbs. (120 x.4)

Look up the rate setting for each tank separately in the appropriate rate chart.

NOTE: WHEN REDUCING METER SETTING, IT MAY BE NECESSARY TO CLOSE THE SHUT OFFSLIDE AND TURN THE METER TO EMPTY IT. THIS WILL EMPTY THE METER AND ALLOW THE PLATE TO MOVE TO A SMALLER SETTING.

CALIBRATION

1. Set pointer to desired rate setting.
2. Secure setting by tightening bolt to lock pointer rod. The proper wrench is in the toolbox.
3. Use the ratchet supplied to open shut off slide until it contacts stop on pointer.
4. Hang calibration bag on scale and zero scale so the weight of the bag will not interfere with calibration.
5. Open clean out door under air tube by releasing toggle clamps.
6. Turn crank at front of Air System one complete revolution to prime meter.
7. Hang bag on meter tube so that clean out door is inside of bag and bag is under openings in the bottom of air tube.
8. Turn meter 1/10 of an acre. For turns per acre see chart. (below)
9. Remove the bag and weigh on scale. Multiply weight times 10 to get rate per acre.
10. Adjust meter to higher or lower setting and recalibrate until desired rate is set.

Plate (1) controls how much of flute will be used. Shut off slide (2) is opened to stop on pointer for any rate setting. When making large rate reductions, close slide and empty meter to allow plate to move to lower setting. Remember to reopen slide until it contacts stop on pointer.

Width	Turns of crank	Width	Turns of crank
30	126	46	83
32	119	48	79
34	112	50	76
36	106	52	73
38	100	54	70
40	95	56	68
42	90	58	66
44	86	60	63
45	85		

Seed Rate Setting Tips

- When setting a rate for a small amount per acre such as canola or sunflowers, calibrate with more than 1/10 of an acre amount of turns. Turn out a complete acre for rates less than a 10 lb. rate
- Recalibrate rates after seeding a partial tank.
- Remember to “prime the meter” by turning the crank before calibrating.
- Remember to zero the scale with the empty bag on it before calibrating.
- Close meter shut off slide on compartment not being calibrated.

Changing Metering Rolls

1. Remove pointer from pointer rod by removing quick pin.
2. Use $\frac{3}{4}$ " wrench to release jam nut on flow plate.
3. Unscrew rod from flow plate and set flow plate aside.
4. Remove chain from meter drive sprocket. Do not remove sprocket.
5. Remove the two nuts that hold bearing on meter shaft (sprocket end only).
6. Pull shaft out of meter while holding on to flute.
7. Remove flute.
8. Re-assemble meter in reverse order with desired flute.

Flute options

All of the Fargo Aire meter rollers are constructed of stainless steel for lifetime performance.

Three flute options are available.

The high capacity flute has eight $\frac{1}{2}$ " deep bars and is used for most applications.

The medium capacity flute has twelve $\frac{1}{4}$ " deep bars and is used on smaller machines or for consistently lower seeding or fertilizing rate.

The canola flute has a pattern of shallow depressions for very low seeding rate.

MAINTENANCE

LUBRICATION:

DRIVE LINE and STEERING - Lubricate all drive line bearings and steering components every 50 hours with a SAE multipurpose grease.

GEAR BOX - The gear box is filled at the factory and requires no maintenance. Service is required only if oil leaks become visible.

HYDRAULIC MOTOR - The hydraulic motor can only be damaged by heat or foreign material. Keep your tractor hydraulic oil and filter serviced regularly to ensure long life from your hydraulic components.

WHEEL BEARINGS - Annually check wheel bearings for tightness. Adjust if needed. Repack every 3 years.

STORAGE

Fully open seed meters.

Open clean out doors on bottom of air tube.

Clean any remaining product from tanks.

Use water to thoroughly clean any compartment used for fertilizer

Thoroughly clean fertilizer and dirt from cup area.

Clean inside of seed meter door. Fertilizer, seed and dirt accumulate in this area.

Clean any remaining product from auger and leave auger slide open.

Oil chains.

Grease all lubrication points.

Check gear box for visible leaks. If none, no service is required.

Release latch on tank lids to relieve pressure on lid gaskets.

TROUBLE SHOOTING

PROBLEM	POSSIBLE REMEDY
Seed cups will not engage	<ul style="list-style-type: none"> *Shear pin may have broken. Clear obstruction and replace pin. *Clutch has no power going to it. Be sure there is power to clutch using test light. *Clutch may have failed. If so, replace clutch.
Seed cups will not disengage	<ul style="list-style-type: none"> *Sprocket on clutch may have frozen shaft, check plastic bearing under sprocket. *Short in monitor is supplying power to the clutch. Find short and repair.
Seed is flowing without cups turning NOTE: A small amount of seed flow is normal and not cause for concern.	<ul style="list-style-type: none"> *Rubber deflector is not down tightly on flute. Lower the deflector. *Rubber wiper on seed cup door damaged or not up tightly against flute. Raise door or replace rubber wiper if damaged. *Product is building up in air delivery system. Increase blower speed.
Excessive seed cracking is occurring	<ul style="list-style-type: none"> *Air stream velocity is too great. Reduce blower speed or adjust blower baffle on dual air stream machines.
Seed boots are plugging	<ul style="list-style-type: none"> *Turning corners too sharply with boots in the ground. Always raise ground opener before making a sharp turn. *Ground openers have been left in the ground when backing up. Always raise ground opener before backing up.
Product distribution is uneven	A one inch hose may be plugged. Re-route or cut 1" hoses to eliminate sags. Clear any obstruction in hoses or boots.
Uneven delivery rate	<ul style="list-style-type: none"> *Loss of tank pressure. Check tank lids for leaks. Inspect and replace faulty gaskets.
Problems with monitor	See monitor section - TROUBLE SHOOTING
Oil showing up on seed lines	Shaft seal failure on hydraulic motor. Replace seal. WARNING: DO NOT DISASSEMBLE HYDRAULIC MOTOR!! THE SHAFT SEAL IS AN EXTERNAL REPLACEMENT ITEM.
Hydraulic motor slow	<ul style="list-style-type: none"> Monitor set to wrong blower speed setting (See Monitor Section). Tractor is not putting out adequate oil. Have tractor dealer inspect tractor hydraulics. Bad couplers. Check couplers on tractor and hoses. Try different couplers.

	AS 2800	AS 3350
Hopper Capacity:	280 bu (168 rear, 112 front)	335 bu (200 rear, 135 front)
Fan Drive:	Hydraulic	Hydraulic
Meter Drive:	Ground	Ground
Wheel Spacing:	120" Front 150" Rear (120" rear optional)	120" Front 150" Rear (120" rear optional)
Tire Size:	23.1 x 26 R1 STANDARD (18.4 x 26 optional)	23.1 x 26 R1 STANDARD (18.4 x 26 optional)
Fill/Unload Auger: Cupped Steel Flighting (poly flighting optional)	8" x 18'	8" x 18'
Total Height:	12' 7"	13' 5"
Total Length:	27'	27'
Max Width:	14' 5"	14' 5"
Fill Height:	11'	11' 10"
Min. Ground Clearance:	19"	19"
Empty Weight:	8400 lbs.	8600 lbs.

STANDARD MONITOR FEATURES:

Bin Level Sensors	(1 per hopper)
Meter Flow Sensors	(1 per meter)
Meter Shaft Sensors	(1 per meter)
Ground Speed Sensor	(1 only)
Fan Speed Sensor	(1 only)
Mechanical Clutch Switch	(1 only) (optional)
Acre Count	(field & total)
