

Air Tram Tramlines

Amity Technology's Air Tram Tramlines lay out a network of tracks in your field for reduced yield loss and more accurate application of chemicals and fertilizers during the growing season without damaging crops. Applications can be completed in a timely manner with less stress and more accuracy.

Benefits of Using Air Tram Tramlines

- Less yield and seed population loss from driving over crops
- Sprayer runs on compacted soil from tractor and drill, resulting in controlled traffic
- Precision accuracy eliminates skips and overlaps
- Ground is firmer with Air Tram Tramlines, so application of nitrogen can happen during a rainfall or immediately after
- Wider window of opportunity for application
- Less spread of disease and infection
- Higher yields through even and accurate application
- Environmentally friendly because there's less excess spraying
