

# Nitro-Bars

Nitro-Bars from Amity Technology maximize your fertilizer investment! With every drop, you will increase yields and efficiency. Used with the Air Tram Tramline system, Nitro-Bars enable growers to accurately and uniformly apply nitrogen with unparalleled accuracy.

Nitro-Bars allow you to use existing equipment to take advantage of split nitrogen application — giving you more value for your nitrogen investment.

## Highly Accurate

The simple and effective design of Nitro-Bars allows each of the four ports to be fed independently, ensuring equal flow to each port. This flow maintains a high standard of application accuracy.

## Easy and Quick to Assemble

Nitro-Bars allow for easy setup to industry-standard 20-inch nozzle spacing on sprayers. They can be fitted to your sprayer in minutes!

## Unaffected by Boom Height or Movement

The vertical stream produced by Nitro-Bars means no overlapping pattern. Because you know fertilizer is going exactly where you want it to, application can take place throughout the growing season, even in windy conditions.

## Reduced Risk of Leaf Burn

Fertilizer contact with the crop is minimized by the configuration of the Nitro-Bars and by the large droplets produced at the leaf surface. Fertilizer rolls off the foliage quickly, virtually eliminating the risk of leaf burn.

## Adaptable for All Application Rates

Color-coded, quick-fit adapters enable flow rates to be easily adjusted to cover a full range of applications and get nitrogen to the roots of the plant where it's needed! Five different adapters are available to encompass flow rates from 5 to 80 gallons per acre.
